MEMORANDUM

Applications nos. 4284/10, Karmansky v. Russia
nos. 5888/11, Ablyazov v. Russia
nos. 5893/11, Askhabov v. Russia

On 14 May 2014 the European Court of Human Rights informed the Government of the Russian Federation of the applications nos. 4284/10, Karmansky v. Russia, 5888/11, Ablyazov v. Russia, 5893/11, Askhabov v. Russia, lodged under Article 34 of the European Convention for the

Representative
Mr Sven NIELSEN
First Section Registrar
European Court of Human Rights

Dear Sir,

With reference to your letter of 11 December 2013, please find attached a copy of the English translation of the Memorandum of the Government of the Russian Federation on the above applications.

Yours faithfully,

[Signature]
As regards the risks which introduction of "substitution therapy" programmes may entail in the Russian Federation

1. On mortality as a result of taking drugs among participants of substitution therapy programmes in Europe

2. Data on some publications in foreign media about the destructive effect of substitution methadone treatment

3. As regards use of the "substitution therapy" method in different countries of the world

4. As regards the methods of treatment of drug addicted persons used in the Russian Federation and their effectiveness

5. As regards absence of violation of A.V. Karmasnovskiy's rights

6. As regards absence of violation of I.N. Abyzhevna's rights

7. As regards absence of violation of I.V. Anokhin's rights

4. Answer to question no. 2 posed by the Court

5. Conclusion

1. Circumstances of the case

Application of Aleksey Vladimirovich Karmasnovskiy (no. 47964/10)

A.V. Karmasnovskiy applied to the Sovetsky District Court of the city of Kazan with a claim against the State Autonomous Healthcare Institution "Republican Neurological Dispenary of the Ministry of Health of the Republic of Tatarstan" (hereinafter - GAUZ "RND MG RT") requesting to recognize his right for treatment by substitution methadone therapy.

To justify his claims A.V. Karmasnovskiy indicated that since 1997 he had been registered with GAUZ "RND MG RT" with the diagnosis "psychotic behaviour disorder resulting from taking opioids, dependence syndrome", and since 2008 he had been registered with GAUZ "Republican Centre for Prevention and Control of AIDS and Infectious Diseases" with the diagnosis "V-20" (HIV) and "V-17" (Hepatitis C). He has been taking heroin since 1998. He has been treated for drug addiction in GAUZ "RND MG RT" 19 times, the latest time in 2000. In 1999 there was a 7-month relapse.

In his application the applicant alleges that he had been (ill-treated) by the medical personnel of the neurological dispensary. In this connection, based on the information received from the Ministry of Health of the Republic of Tatarstan, the authorities of the Russian Federation noted that A.V. Karmasnovskiy applied for medical aid on his own will, and if the patient refused to continue in-patient treatment he was discharged from GAUZ "Republican Neurological Dispensary" of the Ministry of Health of the Republic of Tatarstan. There were no complaints lodged by A.V. Karmasnovskiy concerning provision of medical aid, application of measures of physical restraint in the conditions of GAUZ.

The solution to the problem presented in this document requires careful consideration of the following factors: 1) The initial conditions, 2) The system's behavior over time, and 3) The interaction between the different components. A comprehensive analysis of these aspects will provide insights into the underlying issues and guide the development of effective solutions.

In conclusion, the importance of understanding the system's dynamics cannot be overstated. By thoroughly analyzing the provided data and considering all possible scenarios, we can develop strategies that address the challenges encountered.

Thank you for your attention and cooperation in this matter.
Le second point concernait la gestion des déchets. La situation actuelle est telle que le nombre de déchets produits par les citoyens augmente chaque année. Cela a pour conséquence une surcharge des centres de traitement des déchets, ce qui entraîne des coûts supplémentaires pour l'État.

Le gouvernement a décidé d'adopter une nouvelle politique pour la gestion des déchets. Cette politique vise à réduire la quantité de déchets produits par les citoyens et à optimiser la gestion des déchets existants. Elle inclut la mise en place d'un système de recyclage et de compostage, ainsi que la promotion de la réduction des déchets par les entreprises.

Le projet de loi en question est actuellement en discussion au Parlement. Les débats sont animés et les partisans de la réforme dénoncent les coûts élevés de la nouvelle politique. Cependant, les opposants soutiennent que la réduction des déchets est essentielle pour la protection de l'environnement.

Le projet de loi doit être adopté avant la fin de l'année pour pouvoir être mis en œuvre dans les prochains mois. Les citoyens sont invités à exprimer leur opinion sur cette réforme en participant aux débats parlementaires et en envoyant des lettres à leurs députés.
Theoretical Foundation for the Development of an Evolutionary Approach to Market Research

The first step in developing an evolutionary approach to market research is to understand the current state of the art in market research. This includes an understanding of the various methods and techniques used in market research, as well as an understanding of the limitations and challenges associated with each method.

The next step is to identify the key factors that influence market behavior. This includes identifying the factors that affect consumer behavior, as well as the factors that affect the behavior of businesses. This information can then be used to develop an evolutionary approach to market research that is more effective and efficient than traditional approaches.

The final step is to design and implement the evolutionary approach to market research. This includes developing a process for collecting and analyzing data, as well as developing a process for generating and implementing recommendations.

By following these steps, it is possible to develop an evolutionary approach to market research that is more effective and efficient than traditional approaches. This approach can be used to help businesses make better decisions and improve their bottom line.
According to the standards of the European Monitoring Centre for Drugs and Drug Addiction, in the EU countries, the introduction of methadone maintenance therapy, or "substitution therapy," in 1990 led to a significant decrease in the number of drug-related deaths. However, the effectiveness of these programs has been debated, with some studies showing mixed results.

In Pakistan, the government has implemented various drug control policies, including the creation of the National Drug Control Board (NDCB) in 2004. Despite these efforts, the prevalence of drug use remains high, with methadone maintenance therapy programs being implemented in selected areas.

The Global Fund to Fight AIDS, Tuberculosis, and Malaria has provided funding for drug treatment programs, including methadone maintenance therapy, in many countries. These programs aim to reduce the impact of drug use on public health and social services, while also addressing the root causes of drug use.

In conclusion, the implementation of drug control policies, including methadone maintenance therapy, has shown varying degrees of success in different countries. Further research is needed to evaluate the long-term effectiveness and sustainability of these programs.
